Understanding Voltage Compatibility. When discussing solar panels and batteries, voltage compatibility is paramount. A 12V solar panel typically produces a voltage output of around 17-20V under optimal sunlight conditions. In contrast, a 48V battery operates at a nominal voltage of 48 volts, requiring a higher input

That is the max continuous discharge current rating for each battery. Let's assume your batteries can each handle 100A. Two in parallel means your system can handle 200A from the batteries. If you wire and fuse everything for the 200A then if one battery fails then suddenly the one remaining battery is asked to handle the 200A load. But it can't.
