Electricity generation is the process of generating electric power from sources of primary energy. For utilities in the electric power industry, it is the stage prior to its delivery (transmission, distribution, etc.) to end users or its storage, using for example, the pumped-storage method.. Consumable electricity is not freely available in nature, so it must be "produced";, transforming ...

The central receiver technology is one of the most growing solar power generation technologies due to its superior performance as compared to other available technologies. The entire central receiver system can be classified into three subsystems, such as the heliostat field, receiver/tower system, and power conversion system (Fig. 3.12).
