The most natural users of Battery Energy Storage Systems are electricity companies with wind and solar power plants. In this case, the BESS are typically large: they are either built near major nodes in the transmission grid, or else they are installed directly at power generation plants.

Are battery storage systems economically viable?

While they're currently the most economically viable energy storage solution, there are a number of other technologies for battery storage currently being developed. These include: Compressed air energy storage: With these systems, generally located in large chambers, surplus power is used to compress air and then store it.
