Where is Bouvet Island?

Bouvet Island (/ˈbuːveɪ /BOO-vay; Norwegian: Bouvetøya [buˈvè:œY?]) is an uninhabited subantarctic volcanic island and dependency of Norway. It is a protected nature reserve, and situated in the South Atlantic Ocean at the southern end of the Mid-Atlantic Ridge, it is the world's most remote island.

How did Bouvet Island become a dependency?

The expedition carried out aerial photography of the island and was the first Antarctic expedition to use aircraft. : 64 The Dependency Act, passed by the Parliament of Norway on 27 February 1930, established Bouvet Island as a Norwegian dependency, along with Peter I Island and Queen Maud Land.

How did Bouvet Island get its name?

At that point, the island was given its current name of Bouvet Island ("Bouvetøya" in Norwegian). In 1930, following resolution of a dispute with the United Kingdom over claiming rights, it was declared a Norwegian dependency. In 1971, it was designated a nature reserve.

Why is Bouvet so important?

Bouvet is in a unique position by virtue of the fact that it sits out in the belt of westerlies that hurtle around the continent. And these winds are really important to the way the continent has been changing of late.

How far is Bouvet Island from Antarctica?

Bouvet Island is one of the most remote islands in the world. The closest land is Queen Maud Land of Antarctica, which is 1,700 km (1,100 mi) to the south, : 58 and Gough Island, 1,845 km (1,146 mi) to the north.

When did Norway claim Bouvet Island?

In 1927, the first Norwegian expedition landed on the island, and claimed it for Norway. At that point, the island was given its current name of Bouvet Island ("Bouvetøya" in Norwegian). In 1930, following resolution of a dispute with the United Kingdom over claiming rights, it was declared a Norwegian dependency.

Bouvet Island "belongs" to Norway but is in the South Atlantic at the southern tip of the Mid-Atlantic Ridge. Nobody lives on the 19 square mile rock of which a glacier covers 93%. Scientists believe this makes it a natural ...

Bouvet Island (/ ' b u: v eɪ / BOO-vay; Norwegian: Bouvetøya [3] [buˈvè:œY?]) [4] is an uninhabited subantarctic volcanic island and dependency of Norway. It is a protected nature reserve, and situated in the South Atlantic Ocean at the southern end of the Mid-Atlantic Ridge, it is the world's most remote island.

Bouvet Island beks energy

The island is named after Jean-Baptiste Charles Bouvet de Lozier who first spotted it in January 1739. He was on the hunt for a large southern land mass and assumed Bouvet Island was part of it. At the time he was unable to navigate around it, so was unaware that it was an island. He named it Cap de la Circoncision.

Earthquake energy and rupture duration are estimated by integrating P-wave energy from a global distribution of stations from 25-80 degrees distance following all Mw 6.0+ earthquakes with a GCMT moment tensor. The method follows Convers & Newman, 2011.

Bouvet Island is known as the most remote island in the world; Antarctica, over 1600 kilometers (994 miles) to the south, is the nearest land mass. Located near the junction between the South American, African, and Antarctic tectonic plates, the island is mostly formed from a shield volcano--a broad, gently sloping cone formed by thin, fluid ...
