Where is Bouvet Island?

Bouvet Island (/ˈbuːveɪ /BOO-vay; Norwegian: Bouvetøya [buˈvè:oeY?]) is an uninhabited subantarctic volcanic island and dependency of Norway. It is a protected nature reserve, and situated in the South Atlantic Ocean at the southern end of the Mid-Atlantic Ridge, it is the world's most remote island.

Why is Bouvet Island a remote island?

This uninhabited volcanic island in Antarctica is almost entirely covered by glaciers, making it difficult to approach. Bouvet Island is recognized as the most remote island on Earth because it is furthest from any other point of land (1,639 km from Antarctica).

Does Bouvet Island have a top-level domain?

But here's the weird thing about Bouvet Island having its own top-level domain: It's uninhabited. It's always been uninhabited. Located in the southern Atlantic, the closest land to Bouvet Island is the coast of Antarctica, 1,100 miles to the south.

Does Bouvet Island have ice?

Ice covers about 94 percent of Bouvet Island year-round. Bouvet Island has little to offer. The most remote island in the world is fewer than 20 square miles in size, and it's almost entirely covered by a glacier. Long ago, it was an active volcano, but those fiery days have long since passed.

Are there humans on Bouvet Island?

In 1971, Norway declared the island a protected nature reserve. Today, there is virtually no sign of human activity at Bouvet, with the exception of a single weather station located at Nyrøya. This is the most common landing point on the island created by a rockslide in the 1950s. Penguins are the most apparent life on the island.

When did Norway claim Bouvet Island?

In 1927, the first Norwegian expedition landed on the island, and claimed it for Norway. At that point, the island was given its current name of Bouvet Island ("Bouvetøya" in Norwegian). In 1930, following resolution of a dispute with the United Kingdom over claiming rights, it was declared a Norwegian dependency.

Bouvet Island has little to offer. The most remote island in the world is fewer than 20 square miles in size, and it's almost entirely covered by a glacier. Long ago, it was an active volcano ...

Bouvet Island sunplus solar

We've got a place that beats them all: Bouvet Island, a small outcropping of rock and ice in the Southern Ocean. The nearest land is more than a thousand miles away, making Bouvet the most remote island on the planet. A French sailor named Bouvet discovered the island in 1739. And then he promptly lost it -- he misplotted the island on his ...
