ity and viability of implementing PV/diesel microgrids with integrated battery energy storage by conducting a comprehensive analysis based on economic and environmental parameters. The village Bilgo in Burkina Faso has been considered as case study. The village has been chosen because it already hosts a PV/diesel microgrid with-

Background PV/diesel microgrids are getting more popular in rural areas of sub-Saharan Africa, where the national grid is often unavailable. Most of the time, for economic purposes, these hybrid PV/diesel power plants in rural areas do not include any storage system. This is the case in the Bilgo village in Burkina Faso, where a PV/diesel microgrid without any battery storage system ...

In order to overcome this challenge, The Government of Burkina Faso (GoBF) has set ambitious targets target on national electrification access of 36% (2020) and 75% (2030) and, through the Electrification Development Fund (FDE), already promoted the concept of mini-grids through the installation of around 50 minigrids powered by diesel ...

On 29 October 2019, a workshop was held in Monrovia to collect input from a wide range of stakeholders for the design of the funding round in Liberia, resulting in the outcomes found here. The Pre-Qualification stage of a Call for Proposals (BGFA1) targeted at Liberia closed for applications on 30 November 2020 and first [...]

Description: This paper, part of the Green Mini-Grid Market Development Programme (GMG MDP) document series, assesses the green mini-grid market in Burkina Faso. Green-mini grids include mini-grids powered by renewable energy resources - solar radiation, wind, hydropower or biomass - either exclusively, or in combination with diesel generation.
