

# Burundi boundless energy

How much energy does Burundi use?

Energy in Burundi is a growing industry with tremendous potential. As of 2020, Burundi consumes a total of 382.70 million kilowatt hours (kWh) of electric energy per year. The country produces locally 69% of the electricity it consumes, with the rest imported from other countries.

Will Burundi have access to electricity?

With success, millions of households and industries will soon have accessible energy in Burundi. Reliable and widespread access to electricity is improving the quality of basic services including health, education and security services. Additionally, there will be a reduction in carbon emissions.

What is Burundi's main energy source?

Its most important power source is hydroelectric power, representing 95% of total production. It also uses energy from other renewable (wind, solar, biomass, and geothermal) and coal power plants. Burundi has the world's lowest carbon footprint per capita at 0.027 tons per capita in CO<sub>2</sub> emissions as of 2019.

Why is electricity important in Burundi?

Reliable and widespread access to electricity is improving the quality of basic services including health, education and security services. Additionally, there will be a reduction in carbon emissions. Hopefully, with help, more Burundians will escape the cycle of poverty.

Is Burundi a good place to invest in solar power?

Burundi also holds unique potential for solar power energy development. The country is located on the equator, with temperatures ranging from 17 to 23°C, altitudes varying from 772 meters to 2,670 meters and extremely sunny weather. The Burundian authorities look forward to exploring this option soon.

Is biomass a source of electricity in Burundi?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Burundi: How much of the country's electricity comes from nuclear power? Nuclear power - alongside renewables - is a low-carbon source of electricity.
