What is EnergyLab Cambodia?

Behind EnergyLab Cambodia is a global vision of a world powered by Clean Energy. We work to support the growth of Clean Energy. We initiate and/or guide Clean Energy policies, instruments, and regulations to stimulate RE demands.

What was Cambodia's energy supply in 2021?

Cambodia's energy supply in 2021 was 9,255 GWh. Of this, 44% was from hydro, 41% from coal, 8% from fuel oil, and 6% from solar. In 2021, Cambodia had 305 MW of solar installed and seven grid-connected projects. Another 700 MW of solar was planned or under construction.

How many energy projects are coming to Cambodia?

The Cambodian Cabinet approved four energy projects this past April, a US\$231 million hydroelectric power and three solar power projects with a combined, rated, maximum power capacity of 140 MW. The latter are expected to come online and dispatch power to the national grid by 2020 and 2021 in four different provinces.

Why are Cambodians investing in solar energy?

Cambodian households and businesses are also increasingly investing in behind-the-meter (BTM) solar energy systems as they're much easier and faster to deploy and costs are lower than utility grid rates, market analysts highlight. Photovoltaic electricity potential in Cambodia. 2017 The World Bank, Solar resource data: Solargis.

How much solar energy capacity does Cambodia have?

Cambodia had 305 MW of solar installed at the end of 2021. Another 700 MW was planned or under construction. Cambodia could potentially base its energy system on 100% renewable energy, but this would require large investments, including in energy storage systems.

How has Cambodia's energy sector changed over the past 20 years?

Cambodia's Energy Sector has made tremendous progress over the past 20 years. From experiencing frequent power cuts in the capital city, and having very limited electricity access in rural areas, the country is now able to ensure stable electricity access in Phnom Penh and a village electrification rate over 98%.

As of 2023, half of Cambodia's current electricity generation system continues to rely on fossil fuels, while the other half relies on hydropower. To meet future energy demand, and to ensure access to cleaner sources of energy, the ...
