Solar power systems (PW) comprises solar panel, inverter and supercapacitor. The solar panel can absorb photons and use the PV mechanism to transform photon energy into electricity. Notable, however, solar panels and their efficiencies are affected by factors such as temperature, irradiance level, panel orientation and cell type.

*An average solar PV system can save over 50% per year on electricity, based on an average consumption of a house being 4200kWh/units. 8 x Solar PV panels or 3.2kWp will generate approx. 2700 units per year (50% of 4200,kWh/units = 2100kWh/units).
