What is Canada's shore power technology for ports program?

Canada's Shore Power Technology for Ports program is providing up to \$27.2 million to Canadian port authorities, terminal operators and ferry operators to support the deployment of marine shore power technology. This initiative also supports the implementation of North American Emission Control Area requirements to use cleaner fuels.

How many shore power projects have been completed in Canada?

Including the Port of Montreal's shore power project, five projects have been completed across Canada since the program was launched. The Government of Canada is also funding the installation of shore power facilities for container vessels at two terminals at the Port of Vancouver.

How does Canada's Marine shore power program work?

The program reduces emissions by reducing ship idling at ports. This is one way Canada is acting on its commitment to reduce greenhouse gas emissions by 17% from 2005 levels by 2020. The program will provide up to 50% of the funding for implementing marine shore power technology at Canadian ports.

Do container ships use shore power?

Supplied Right now, around 34 per cent of container ships coming into the Port of Vancouver are fitted to use shore power; however, because the technology is not a one-size-fits-all system, not all of those ships are capable of connecting to Vancouver's infrastructure.

Does Canada Place have shore power?

After all, it's been working for the cruise ship industry for the last decade. In 2009, the Canada Place cruise ship terminal was the first in Canada and the third in the world to offer shore power for cruise ships. Since then, 583 tonnes of air pollutants and 20,780 tonnes of greenhouse gases have been eliminated.

Does Canada have a sustainable transportation system?

The Government of Canada is also funding the installation of shore power facilities for container vessels at two terminals at the Port of Vancouver. "The Government of Canada is committed to maintaining a safe, efficient and green transportation system.

Each time a large container ship connects to shore power while at a dock for 60 hours, up to 95 tonnes of air pollutants and greenhouse gas emissions can potentially be eliminated, which...
