

# Chile energy and meteo systems

Can Chile build a more resilient energy system?

Chile has great potential to build a more resilient energy system by diversifying energy sources. The climate conditions in Chile are projected to be favourable for developing renewable energy sources, such as solar and wind, thanks to the comparatively low number of extreme heat events.

Does Chile have a climate-resilient energy system?

Continuing the efforts towards climate-resilient energy systems, Chile is currently working on updating the Climate Change Adaptation Sectoral Plan for the Energy Sector, mandated by the Climate Change Framework Law, which was first published in 2018.

Why is climate resilience important in Chile?

The importance of climate resilience is noted in many of Chile's other policies, including its Just Transition Strategy for the Energy Sector, its Decarbonisation Plan, and its 2022-2026 Energy Agenda.

Why is Chile moving towards a greener energy matrix?

Recognizing the crucial role of the electrical industry in environmental sustainability, Chile is pushing towards a greener energy matrix, by means of robust regulatory reforms and significant infrastructural upgrades. At the center of these infrastructural upgrades is the expansion of Chile's electrical transmission system.

How will Chile's energy reforms impact the economy?

As these reforms take shape, they promise to significantly impact the overall sustainability and economic viability of the nation's energy infrastructure. Chile has embarked on an ambitious journey towards energy transition, framed by its commitment to combat climate change and promote sustainable growth.

Will Chile's energy infrastructure be affected by floods by 2045?

A study commissioned by Chile's Environment Ministry found that some energy infrastructure (notably two substations, a thermal power plant and eight fossil fuel distribution centres) would be exposed to floods by 2045 due to their low-elevation levels and proximity to the coast.

energy & meteo systems energy & meteo system is company based in Oldenburg, which specialises in energy meteorology and wind power prediction. They provide meteorological data and prediction products for energy providers, meeting "the market's demand for reliably calculated predictions of the electric grid input from renewable sources".

**GOAL:** to promote an understanding, on a global scale, of the dynamics of change in energy systems, quantify emissions and their impacts, and accelerate the transition to carbon-neutral, environmentally benign energy systems while providing affordable energy to all.

With its wind and solar power forecasts and consulting services for the global energy industry, energy & meteo systems is one of the leading international providers of forward-looking services and IT products for the market and grid ...

In workshops, energy & meteo systems will convey fundamental knowledge on the Virtual Power Plant and wind and solar power predictions to the key players in the South American energy sector. A practical, real-world example of this technology is intended for the grid operators in Argentina ( CAMMESA ) and Columbia ( XM ).

Under this, the country has taken various regulatory steps with a focus on making renewable energy sources (RES) the key generation source, streamlining transmission network expansion, and promoting energy storage ...

renewable energy projects is considerably lower compared to conventional technologies, as pointed out by one of the interviewed energy experts. Thus, solar and wind energy generation are fundamental pillars in the energy sector's transition process in Chile and to

Customer Spotlight: MVV Trading - Today we want to highlight MVV Trading GmbH, a long-term customer and a key player in the German energy market. As part of the prestigious MVV Energie AG, this ...

Chile has great potential to build a more resilient energy system by diversifying energy sources. The climate conditions in Chile are projected to be favourable for developing renewable energy sources, such as solar and wind, thanks to the comparatively low number of extreme heat events.

# Chile energy and meteo systems

Over the past decade, Chile has begun a rapid shift toward cleaner energy, aided by a liberalized power market and strong policy support. In the next three decades, the country's electricity system is expected to be transformed further, with lower- and lower-cost renewable resources gradually pushing out conventional power plants.

The services of energy & meteo systems, emsys VPP und emsys grid services are made use of by grid operators and power traders from Europe, North and South America, Asia, Africa and Australia. Since energy & meteo systems" foundation in 2004 we are engaged in research and development projects in power forecasts, grid operations, power trading ...
