This leaves the output of the panel the same but reduces the electrical resistance in each of the cells leading to an efficiency gain for the solar cell. This is now a common technology deployed in most newer solar panel models. They are similar in size and weight to their full-cell equivalents. Solar panel output or "wattage"

The variation in output will usually not change the size of a single solar panel. The standard size of a 250W solar panel is approximately 1.7m x 1.0m, with slight variations depending on the manufacturer. The reason for this is that there are a number of factors that decide the solar panel's physical dimensions.
