Enclosure hygrometers and dehumidifiers play a vital role in maintaining the optimal conditions within enclosures, especially those housing electronic and electrical components. These devices are crucial for managing the relative humidity inside the enclosure, which is key to protecting electrical components from condensation.

Another type of electrical cabinet dehumidifier is electronic. It uses a Peltier heat pump to transfer heat to a cool surface, condensing the air's water vapor. Like the first option, a bucket or pipe will need to be installed to collect the water. Another type removes humidity without involving water through a process called electrolysis.
