

What version are you playing? I remember EnderIO working with both FE and RF when I last used it. ...
Reply reply winkel1975 o Ender IO is accepting Forge Energy from any mod, regardless what label other mods are using, if this is RF, CF, IF, of Ender IO native µI, Forge Energy is always Forge Energy.
Reply reply ...

It uses energy to charge items in the inventories of players in a 49x49x49 area centered at the block (24 blocks away from the source). It can store up to 200,000 uI. It can only accept energy from its bottom face. ... Energy; RF storage: 200,000 RF: The Wireless Charging Antenna is a block added by the Ender IO. It uses energy to charge items ...

EnderIO Energy Conduits: Pros: Can overlap with other Conduits, allowing for transfer of Items, Fluids, Redstone, ME, and OpenComputers Cable all in the same block, can also properly function with Immersive Engineering Connectors if configured right.

Hello, i built a NuclearCraft Reactor that is 7x7 and 12 blocks high, it produces a colossal amount of energy, and i was wondering what is the best way to Store this energy, should i use ...

Energy; RF storage: 0 RF: Max RF output: 40 RF/t: RF production: 40 RF/t: The Photovoltaic Cell is a block added by Ender IO. It is used to generate Micro Infinity (µI). At 100% efficiency, it will produce 40 µI/t. The efficiency is at 100% when the sun is directly above the machine; its efficiency will be lower while the sun is rising or ...

I love EnderIO but I wish it had a pump for fluids. That stirling generator can take lava buckets and automating that is not difficult. Reply reply Top 1% Rank by size . More posts you may like r/feedthebeast. r/feedthebeast. The subreddit for all things related to Modded Minecraft for Minecraft Java Edition --- This subreddit was originally ...

The Wired Charger is a machine added by Ender IO. It is used to recharge items which use Micro Infinity (µI) or other forms of Forge Energy, as well as items which use Redstone Flux. Its charging speed depends entirely on the energy storage of the item that is currently being charged. Items with larger energy storage will be charged faster. Like most Ender IO machines, the ...

The Energy condenser takes all emc-able items and converts them into a target item. The idea being that you can turn all those bones and zombie flesh into nether stars or some other high value item, that you can then grab that high value stack, and drop into your tablet by ...

The Power Monitor is a block added by Ender IO. It is a special device which provides information about

Micro Infinity-based energy networks and can output a Redstone signal depending on available energy quantities. Its GUI has two tabs. The ...

Depending on their Global Level, Capacitors can increase the Speed, Range or Energy Storage of machines. Special capacitors with wildly varying properties can be found in loot chests. Basic Capacitor Global Level: 1. Double-Layer Capacitor Global ...

Energy Conduits; There are 3 types of Energy Conduits: Energy Conduit; Enhanced Energy Conduit; Ender Energy Conduit; The GUI of all Energy conduits is split between their 2 modes: insert and extract. These modes can be toggled independently. Insert; Extract; Redstone Mode (1) Always active; Active with signal; Active without signal; Never active

The Power Monitor is a block added by Ender IO. It is a special device which provides information about Micro Infinity-based energy networks and can output a Redstone signal depending on available energy quantities. Its GUI has two ...

Yes and no? The highest amount of power transfer/storage in the base mod is 20,480 RF per Ender Energy Conduit, which isn't that much power (I'll also note that the transfer speed is per connection, not per conduit, but that rabbit hole ...

Hello, i built a NuclearCraft Reactor that is 7x7 and 12 blocks high, it produces a colossal amount of energy, and i was wondering what is the best way to Store this energy, should i use Induction Matrix (Mekanism), should i use a array of EnderIO Capacitors or is there a better way to storage this energy?

The Basic Capacitor Bank is a block added by Ender IO. It is used to store Redstone Flux (RF); each block can store one million RF. It is a shapeless multiblock; putting a Basic Capacitor Bank next to another Basic Capacitor Bank will combine their energy storage. Within the GUI, up ...

Used to create EnderIO alloys Can also be used as a powered furnace Upgrade with capacitors to increase speed and energy storage: Upgrades; Previous tier: Next tier: Energy; RF use: Base: 30 RF/t: RF storage: ... Better capacitors increase the machine's maximum energy usage rate and thus processing speed, as well as the internal energy buffer ...

An energy conduit for almost every situation, including the nearly unlimited power transfer of Stellar conduits and the early game crude steel conduits. More Alloys Ingots, blocks, nuggets and grinding balls for Stellar Alloy, Melodic Alloy, Crystalline Alloy, Crude Steel, Crystalline Pink Slime, Energetic Silver and Vivid Alloy

Yes and no? The highest amount of power transfer/storage in the base mod is 20,480 RF per Ender Energy Conduit, which isn't that much power (I'll also note that the transfer speed is per connection, not per conduit, but that rabbit hole can get complicated).

Enderio energy storage Lesotho

(Please note, above Images are from the old design of the blocks, and are not updated to the new ones for now!) The Inventory System blocks are a set of differing sized inventories to be used with the Inventory Pannel system, they cannot be opened by hand, but they have a invisible inventory that can be used by the Inventory Panel.

Ender IO is a large, ender-themed mod that combines technology with magic. It was created by CrazyPants and is currently maintained by HenryLoenwind and tterrag1098. The mod is centered on various kinds of teleportation and adds many different machines and items for all purposes, including ore processing, farming mobs, transport, automation, and player progression. Ender ...

It is intended behaviour that Galacticraft cables and EnderIO power conduits cannot directly connect to each other. Use a block like Energy Storage Module or an EnderIO Capacitor if you want to join the two types of power.

Pretty sure each conduit has it's own buffer size equal to the total amount of energy it can input/output. Mousing over one using WAILA will show how much energy the conduit has, and the monitor will show you all of the conduits and their current energy level/max stored. At least that was my understanding of everything.

It is intended behaviour that Galacticraft cables and EnderIO power conduits cannot directly connect to each other. Use a block like Energy Storage Module or an EnderIO Capacitor if you want to join the two types of ...
