Energy Toolbase is an industry-leading software platform that provides a cohesive suite of project estimating, storage control, and asset monitoring products that enable solar and storage developers to deploy projects more efficiently. Energy Toolbase's SaaS products are used by over 1,500 distributed energy organizations worldwide.

Variables the "Storage Capacity Optimizer" references: Energy Toolbase runs each ESS simulation independently, referencing the following variables: Energy Use Profile: usage data & metering specifications. Control Settings Info: ...

At the top of each Cash Flow summary, you can define the Cash Flow name, Cash Flow Type (Payment/Income), and Income type (income, payment, Federal Tax Credit, etc.). Stream Details: Stream Type: whether the "Cash Flow" is a single payment, monthly payment, annual payment, or amortization schedule. Each Stream type provides several conditions that you can individually ...

It's crucial to upload these as well, as they allow us to accurately account for generation costs from your energy retailer. Interval Data. 15, 30, or 60-Minute Interval Data: Interval data helps us analyze your energy consumption patterns. If available, upload your interval data in 15, 30, or 60-minute formats.

Solar Optimum partnered with Energy Toolbase to deploy an ESS integrated with ETB Controller and Acumen AI, leveraging time-of-use (TOU) arbitrage as the primary control strategy.

The Energy Toolbase modeling platform has been seeing steadily increasing activity in the LATAM (Latin America) market. Since we officially opened up our platform to modeling international (outside the US) projects in April of 2018, we have seen a 19% CAGR (compound annual growth rate) in the number of

Scanifly, the solar industry's leader in PV design and field operations software, is thrilled to announce an integration with Energy Toolbase (ETB), a leading provider of energy project modeling and financial analysis software. This strategic partnership streamlines the solar project lifecycle, from initial customer quoting and remote design tools to detailed site ...

Energy Toolbase has announced that Solesca, a leading solar design solution, has joined the ETB Developer platform for design services. This partnership brings Solesca's cutting-edge pre-CAD design capabilities to ETB Developer users, offering faster, more accurate, and cost-effective design solutions for commercial and industrial (C& I) and community-scale ...

PVWatts Simulation: this is a free service that comes with your Energy Toolbase subscription. From here, you can build either a "simple" or "detailed" PV array using NREL PVWatts API v8. TMY Station: select a TMY (typical meteorological year) weather station. We default/recommended the closest station to the Facility location provided.

Energy Arbitrage: The PV charges the battery in the morning, when energy is cheap, and discharges it later in the afternoon when TOU rates are high. Also can help reduce exports. 1. Peak Shaving: Reduces non-coincident demands using AI to determine how best to dispatch the batteries. This system works in real-time. It also does arbitrage. 1.

The system settings will be configured so that there is as much discharged energy as possible from the battery. This command will remove any de-rate settings on the inverter for the duration of the override. Options. Min SOC . Discharge Options Min SOC. The minimum usable SOC the system will reach while operating in this mode.

energy storage systems for maximum savings and efficiency.

The developer turned to Energy Toolbase to acquire the turnkey energy storage system. The system will play a preemptive role in improving overall savings at the campus by working against high "on-peak" windows. At the campus, the company elected to deploy four BYD CHESS 120 kW, 2-hour energy storage systems equipped with
