Max fit: will place as many PV panels onto your site model as can fit. Stringing your system. Manual stringing This option allows you to design and string the system just the way you envision. After placing the panels, you can manually string the system, allowing for a higher degree of precision and customization. To manually string your system:

As the three PV cells are connected in series, the generated output current (I) will be the same (assuming the cells are evenly matched). The total output voltage, V_T will be the sum of all the individual cell voltages added together. That is: $V_1 + V_2 + V_3 = 0.5V + 0.5V + 0.5V = 1.5V$. Then the solar cell I-V characteristic curves of our three cells example are simply added ...

For a fixed solar installation, it is preferred that the PV panels are installed with a centralised tilt angle representing the vernal equinox, or the autumnal equinox, and in our example data above this would be about 38 degrees (38 o).. However, this tilt orientation is not as critical with regards to the solar panels orientation as even at a tilt angle of nearly 45 degrees (45 o) with ...
