

What is a glazed flat-plate solar collector?

A glazed flat-plate solar collector consists of a shallow rectangular box with a flat black plate behind a tempered glass cover. The plate is attached to a series of parallel tubes or one serpentine tube through which water or another liquid (such as an antifreeze solution) passes.

How do I install a solar array on a roof?

Using your engineered design, locate the array layout on the roof, and determine mount locations. Measure and determine the spacing between the Solar Stack pedestals according to the solar array design. Mark the lines across the roof for all the mounts.

How to install solar stack pedestals?

Solar Stack pedestals can be installed on different types of roofs: Tile, Modified Bitumen, TPO, Concrete etc. Roof must be cleaned with brush. Place, where the Solar Stack pedestals and solar panels are to be placed on the roof must be clean, dry and at.

How do I install a solar stack?

Mark the lines across the roof for all the mounts. Prepare the Solar Stack pedestals and place them next to the marked lines where they will be installed. Surface Preparation. All roof surfaces must be free of any debris, dirt, grease, oil, and standing water before adhesive is applied. Follow adhesive manufacturers application instructions.

How does a solar absorber plate work?

The plate is attached to a series of parallel tubes or one serpentine tube through which water or another liquid (such as an antifreeze solution) passes. Sunlight passes through the glazing and strikes the absorber plate, which heats up, changing solar energy into heat energy.

What is solar stack?

Solar Stack's innovative design incorporates a patented pedestal used in conjunction with a code-approved adhesive. Solar Stack eliminates potentially disastrous roof penetrations and allows roof warranties (and the roof itself) to remain intact.
