Protecting solar output: because each panel has its own inverter, if one panel can't generate as much due to being in the shade or having a fault, the others aren't affected. Longer lasting: you probably won't need to replace microinverters for 20-25 years cause of this, they often come with longer manufacturer warranties than string inverter systems.

*How we worked out your Solar Savings. The estimated savings you can make with our Solar Savings tariff are based on a 2-3 bedroom home with a medium electricity demand of 2,700kWh (Ofgem), installing a 10 panel system with a 3.68kW inverter and a 10.5kw battery via a Good Energy package. It is estimated that you will export 20-25% of the power you generate.

The Engineering, Procurement and Construction (EPC) Contractor, SALT Energy, employed local subcontractors to install and wire an 824-solar panel PV system across five slopes of three buildings.
