Yes, many large solar panel installations combine series and parallel wiring in one array to maximize the product of each group of panels. It's possible to strike the optimal balance between series and parallel wiring by carefully planning the wiring based on the location of the panels on the roof relative to the sun and obstacles that obstruct sunlight at certain ...

Solar Array Volts & Amps Wiring Diagrams: This diagram shows two, 5 amp, 20 volt panels wired in series. Since series wired solar panels get their voltages added while their amps stay the same, we add $20V + 20V$ to show the total array voltage and leave the amps alone at 5A. There is 5 Amps at 40 Volts coming into the solar charge controller.. This diagram shows three, 4 amp, ...

Yes, many large solar panel installations combine series and parallel wiring in one array to maximise the product of each group of panels.
