Firm Capacity (kW, MW): The amount of installed capacity that can be relied upon to meet demand during peak periods or other high-risk periods.

What is storage duration?

Storage duration is the amount of time storage can discharge at its power capacity before depleting its energy capacity. For example, a battery with 1 MW of power capacity and 4 MWh of usable energy capacity will have a storage duration of four hours.

The storage volume for a compressed gas can be calculated by using Boyle's Law . $p_a V_a = p_c V_c = \text{constant} (1)$. where . p_a = atmospheric pressure (14.7 psia, 101.325 kPa) . V_a = volume of the gas at atmospheric pressure (cubic feet, m³) . p_c = pressure after compression (psi, kPa) . V_c = volume of gas after compression (cubic feet, m³)
