How to connect solar panels in series?

Solar connectors can be used to connect solar panels in series, parallel, or series-parallel. Installing them in series is quite simple while installing them in parallel requires an additional component. To connect solar panels in series you just plug the positive connector of a PV module into the negative connector of the next module.

How to connect two solar panels?

As clearly visible in the picture, it will be enough to wire the positive pole of one panel to the positive pole of the other one and then wire the negative pole of one panel to the negative pole of the other one. To make this type of connection we can use a pair of MC4 Y-branch solar connectors.

Can a 6V solar panel be wired parallel to a 12V panel?

In this case, it is possible to wire the two 6V panels in series and then wire the resultant array in parallel to the 12V panel. However, the latter type of connection is at the expense of efficiency. It is therefore essential, before making a parallel connection, to carefully check the voltage of the solar panels.

How do solar panels work?
