4 1. Kit presentation GSE In-Roof System(TM) enables modules installation on every type of roof covering (curved tiles, interlocking, flat, slates), on new buildings or buildings being renovated. The system may be installed in portrait or landscape format, with a specific mounting plate for each format, on both small installations (less than 3 kWp) and large roofs (ie specific manual).

Flat roof PV systems are generally installed in the form of concrete columns and PV brackets. The investment cost is not high and the economy is better. On a horizontal roof, we can determine the angle of the PV panels by adjusting the brackets so that the PV system receives the most light radiation to obtain the maximum power generation. The biggest benefit of installing PV power ...
