Installation Techniques. The actual installation of the solar roof mounting system must be carried out with precision and care. This involves: Mounting Hardware Installation: Securely attaching the mounting hardware to the roof, ensuring that it is properly sealed and structurally sound.

$N \text{ modules} = \text{Total size of the PV array (W)} / \text{Rating of selected panels in peak-watts}$. Suppose, in our case the load is 3000 Wh/per day. To know the needed total W Peak of a solar panel capacity, we use PFG factor i.e. $\text{Total W Peak of PV panel capacity} = 3000 / 3.2 \text{ (PFG)} = 931 \text{ W Peak}$. Now, the required number of PV panels are $= 931 / 160\text{W} = 5.8$.

The basic is to position the bracket to capture the panel and then tighten the bolt that clamps the bracket to the panel. You may need only a single socket wrench with the correct socket type, or you may need two socket ...
