What are India's energy policies?

India's energy policies center on its position concerning the transition to renewable energy. Renewables are expected to constitute 42% of global electricity by 2028. The study identifies gaps in the efforts of both state-level and national institutions to address the challenges associated with integrating renewables.

Does India have energy capabilities?

The methodology adopted to evaluate India's energy capabilities leverages International Energy Agency (IEA) projections. The results show that the nation has made notable advancements. India's energy policies center on its position concerning the transition to renewable energy.

How has India achieved its energy transition goals?

India has set bold ambitions and demonstrated remarkable progress on energy transition investment. For example, it surpassed its 2030 goal of achieving 40% of installed capacity from renewable energy sources nine years in advance.

What will India's energy future look like?

According to Jennifer Granholm, US Secretary of Energy, "In so many ways, the world's energy future will depend on India's energy future." In line with this, the country is adopting ambitious goals for deploying solutions such as clean hydrogen, energy storage, carbon capture and sustainable aviation fuels.

Why is energy demand growing in India?

Energy demand is set to grow rapidly in India, with major impacts on the global energy sector. Investments in generation and grid are required to provide universal electricity supply. The role of renewables within the country's energy mix is growing, along

How is India advancing Advanced Energy Solutions?

As the world watches, India is progressing advanced energy solutions rapidly. India is setting ambitious targets for deploying advanced energy solutions such as clean hydrogen, energy storage and carbon capture. By 2030, it plans to invest over \$35 billion annually in these areas.

At times when the world is in the midst of a global energy crisis, the International Energy Agency (IEA) states that India's energy demand could rise over 3% annually until 2030 due to urbanisation and industrialisation. Though, India continues to make great strides with renewables deployment and efficiency policies.

India, the fastest-growing large economy, is advancing its energy transition with a goal of achieving net zero by 2070 and meeting 50% of electricity needs from non-fossil sources by 2030. Solar energy has grown at a 36.5% CAGR, while investments in EVs, wind energy, and BESS total billions annually.
