Effective and durable roof insulation can prevent significant heat loss from residential and commercial properties. Increasing the energy efficiency of a building can also mean reducing bills and operating costs. We supply a variety of insulation products for flat or pitched roofs, as well as loft insulation, made from premium stone wool to keep temperatures consistent.

Elevation - the optimal elevation for a photovoltaic installation is 40°; from horizontal. This has been calculated to give you the maximum exposure during all seasons i.e. the low sun in winter and the high sun in summer. Most standard pitched roofs are around 35°; Tracking systems are available which move the panels to track the Sun throughout the day to give you the best ...

Flat roof PV systems are generally installed in the form of concrete columns and PV brackets. The investment cost is not high and the economy is better. On a horizontal roof, we can determine the angle of the PV panels by adjusting the brackets so that the PV system receives the most light radiation to obtain the maximum power
