

Liechtenstein level energy solutions

How much energy does Liechtenstein produce from renewables?

Energy production from renewables consisted of 27,71 % hydropower production (8,91 % imported and 18,80 % domestic), as well as 4,76 % produced domestically from solar energy. Liechtenstein's overall energy production from renewables consisted of 8,91 % imports and of 23,56 % domestic, non-export production.

How do Liechtenstein municipalities get the Energy City label?

Liechtenstein municipalities can obtain the Energy City label if they continuously ensure efficient energy use, increase investments for renewables, including solar energy, wind energy and hydropower, and promote environmentally compatible mobility. The certificate is awarded by the Energy City Sponsoring Association.

Is Liechtenstein a solar power station?

Samina Power Station, currently the largest of the domestic power stations, has been operational since December 1949. In 2011-2015, it underwent a reconstruction that converted it into a pumped-storage hydroelectric power station. In recent decades, renewable energy efforts in Liechtenstein have also branched out into solar energy production.

How many hydroelectric power stations are there in Liechtenstein?

Liechtenstein has used hydroelectric power stations since the 1920s as its primary source of domestic energy production. By 2018, the country had 12 hydroelectric power stations in operation (4 conventional/pumped-storage and 8 fresh water power stations). Hydroelectric power production accounted for roughly 18 - 19% of domestic needs.

What percentage of Liechtenstein's electricity comes from non-renewable sources?

In 2016, non-renewable sources accounted for 67,35 % and renewable sources for 32,47 % of Liechtenstein's electricity supply. Energy production from non-renewables consisted of 56,88 % foreign imports of electricity produced by nuclear power, and 0,65 % of electricity produced in Liechtenstein from imported natural gas.

Why is Liechtenstein a good place to live?

For instance, the Principality has the world's largest share of photovoltaics per capita. Furthermore, Liechtenstein is also an important role model regarding sustainable energy policy. In 2003, the municipality of Triesen was the first to join the Energy City Association. Triesen was certified as an Energy City one year later.

Liechtenstein has integrated its climate policy very strongly into individual sectorial policies. The focus is on energy, environmental, transport, agricultural and forestry policies. All of these areas encompass measures that contribute to the reduction of climate gases.
