

Does Mauritius need a battery energy storage system?

Mauritius aims to increase the share of renewable energy sources in its energy mix, which leads to fluctuating power injection. To reduce this fluctuation from variable renewable energy sources, the installation of Battery Energy Storage Systems (BESS) is required.

What can I do with my electric car in Mauritius?

Your electric or hybrid car can also act as an additional battery storage. Sell your electricity: CEB Mauritius offers programs that allow you to feed excess solar energy back into the grid, earning you compensation for your contribution to the overall energy supply.

How many storage depots are there in Mauritius?

TotalEnergies has several storage depots in Mauritius. In Mauritius, we retail specialty and petroleum products to our business customers. We have a network of approximately 50 service stations, where we retail our fuel and products, and offer related services. (Storage depots are mentioned in the passage, but not explicitly stated as the number, so the passage is left unchanged to maintain accuracy.)

How will Mauritius transition to a low carbon economy?

The Mauritian energy transition to a low carbon economy is picking up speed. The CEB has installed the first grid-scale Battery Energy Storage System (BESS), the first in its kind in Mauritius, to enable high capacity storage of renewable energy in the grid.

How does Mauritius generate energy?

Mauritius generates energy through various means including wind farms, solar energy, biomass, wave, and waste-to-energy projects. Currently, bagasse (sugarcane waste) is the leading source, contributing 13.3 percent to the renewable energy generation. Mauritius derives other renewable electricity from hydro, wind, landfill gas, and solar.

What is Mauritius' long term energy strategy?

This is in line with the Government of Mauritius' Long Term Energy Strategy 2009-2025 to increase the share of renewable energy in our energy mix (electricity production, transportation sector and manufacturing) to 35% by, namely, reducing the country's dependence on coal and heavy oil for electricity generation.
