What is innolith I-state battery technology?

Basel, Switzerland, 13 th June 2023 - Innolith, a European developer of Li-ion battery cell technologies, today announces the commercialisation of its I-State battery technology platform for use in electric vehicles (EVs) and e-mobility applications.

What is innolith battery cell technology?

The Innolith battery cell technology is based on the proprietary liquid inorganic electrolyte that can operate at up to 5 volts without degradation, unlike the Li-ion batteries in use today that are limited to 4.2 volts. This gives the batteries higher gravimetric energy density of 300 Wh/kg and volumetric energy density of 825 Wh/L.

What is innolith e-mobility battery technology?

Innolith runs one of the world's leading battery cell research programs at its R&D Center in Bruchsal, Germany, where it is pioneering a next generation e-mobility battery technology based on a proprietary electrolyte that delivers cells with lower cost, high energy density along with higher safety and temperature performance.

Is innolith a sustainable battery?

The I-State battery uses 20% fewer rare-earth metals per kilowatt-hour than traditional lithium-ion batteries. The battery is also made with 100% locally produced electrolyte, and the electrolyte is recyclable, collectively making the battery more sustainable. Innolith is headquartered in Basel, Switzerland. It was started over 20 years ago by

Does innolith have a high power cell?

In addition to a high energy cell, Innolith has recently developed a high power cell on the same I-State platform. Development of the high-power cell that still retains exceptional energy density was possible due to the high conductivity of the I-State electrolyte (up to four times that of conventional Li-ion electrolyte).

Is innolith a good electrolyte?

Innolith's I-State platform is well suited for applications that require both high energy and high power. This is achievable due to the electrolyte's exceptionally high conductivity, up to four times that of conventional Li-ion electrolytes.

By adhering to principles of Reduce, Reuse, and Recycle, Innolith is integrating sustainability into its core. Innolith has designed its batteries for reuse, minimizing waste. The technology allows a 20% reduction in rare-earth metal usage per kWh and utilizes locally-produced, fully recyclable electrolytes, significantly curbing carbon ...

Green Car Congress, a website focusing on sustainable mobility, recently covered the commercialisation of our I-State Technology. The article explains how I-State offers high energy density, improved safety, and performance. It operates at higher voltages, allowing for better cathode utilisation and a 20% reduction in cathode metals. Discussing how we have ...

Innolith, an energy technology start-up based in Switzerland, claims to have made the world's first rechargeable battery capable of powering an electric vehicle (EV) for more than 600 miles on a single charge.

A MIGHTY BATTERY TECHNOLOGY. Our current commercialisation focus is cylindrical format as the most common battery format, ready to be manufactured anywhere in the world. We have already produced full cell 21700 B-samples that are well accepted by variety of partners across multiple e-mobility industries.

Innolith, a European developer of Li-ion battery cell technologies, has begun the commercialization of its I-State battery technology platform for use in electric vehicles (EVs) and e-mobility applications. The company says that I-State will cut EV costs and increase vehicle range through a high energy density of 300 Wh/kg (NMC811/Graphite ...

The I-State Power Cell will be used for e-mobility applications that require high-energy density battery capable of delivering high power. Target markets include leading performance sports and luxury BEV, off-road, ... The technology used in the I-State battery reduces those cons by lowering the carbon footprint of an EV battery while also cutting down manufacturing costs and increasing energy density. The battery is innovative in that it uses an inorganic liquid electrolyte, which allows it to operate at higher voltages than lithium-ion batteries.

Innolith AG is the world leader in rechargeable Inorganic Battery Technology. The company is based in Basel, Switzerland and it claims 1000 Wh/kg battery breakthrough with unprecedented levels of safety, durability, power and now energy. "The EV revolution is currently stymied by the limitations of available batteries." explains Sergey Buchin, CEO of Innolith AG.

Swiss startup Innolith claims it is solving both with the development of the world's first 1,000 Wh/kg rechargeable battery. As The Verge writes, "A battery with that density would be capable of powering an electric car for 1,000 kilometers (621 miles) on a single charge."

For 2023, Innolith's I-State battery technology has been selected for the Mobility Award, which acknowledges transformative technologies that assist the global energy transition. Participants from 40 countries submitted a record 1300 entries to the 2023 Green Product Awards, demonstrating the importance of ideas, products, concepts and ...
