Water tanks in buildings are simple examples of thermal energy storage systems. On a much grander scale, Finnish energy company Vantaa is building what it says will be the world's largest thermal energy storage facility. This involves digging three caverns - collectively about the size of 440 Olympic swimming pools - 100 metres underground that will ...

Battery energy storage systems (BESSs) use batteries, for example lithium-ion batteries, to store electricity at times when supply is higher than demand. They can then later release electricity when it is needed. BESSs are therefore important for "the replacement of fossil fuels with renewable energy".

Grid-scale storage plays an important role in the Net Zero Emissions by 2050 Scenario, providing important system services that range from short-term balancing and operating reserves, ancillary services for grid stability and deferral of investment in new transmission and distribution lines, to long-term energy storage and restoring grid operations following a blackout.

The world's largest battery energy storage system so far is Moss Landing Energy Storage Facility in California. The first 300-megawatt lithium-ion battery - comprising 4,500 stacked battery racks - became operational at the facility in January 2021.

Some big tech brands, including Samsung and Tesla, sell home-energy storage systems. Most of the biggest energy suppliers now sell storage too, often alongside solar panels: EDF Energy sells batteries starting from €5,995 (or €3,468 if you buy it at the same time as solar panels). It fits lithium-ion GivEnergy-branded battery storage systems.
