Locate the wire cover on the back of the inverter unit. Remove any screws or fasteners securing the wire cover in place. Gently slide or lift the wire cover to detach it from the inverter. Set aside the wire cover in a safe location for future reinstallation, if necessary. Installing the Communication Board

DC arc faults are dangerous to photovoltaic (PV) systems and can cause serious electric fire hazards and property damage. Because the PV inverter works in a high-frequency pulse width modulation (PWM) control mode, the arc fault detection is prone to nuisance tripping due to PV inverter noises. An arc fault detection
