How LONGi Solar module junction box works?

LONGi solar module junction box contains bypass diode which is in parallel connection with the cell string. If hot spot occurred, the diode will come into operation to stop the main current from flowing through the hot spot cells in order to prevent module over-heated and performance loss.

How to connect two modules in a junction box?

Each module has two individual wires connecting the junction box, one is negative pole and the other is positive pole. Two modules can be in series connection by inserting the positive pole at one end of wire of one module into the negative pole of the adjoining module.

How do you connect a solar panel to a JBOX?

Install a ground lug, and tie the ground wire from the house power distribution panel and the PV array Jbox. The grounding lug should be attached to the box with a self tapping screw so that it makes good electrical contact with the box. Finished disconnect switch.

Do PV modules need to be connected to ground?

PV module installation site is exposed to long-term humid conditions such as floating PV system. To reduce the risk of PID, on the modules DC connection site, it is recommended to connect the negative to ground. Suppose, in our case the load is 3000 Wh/per day. To know the needed total W Peak of a solar panel capacity, we use PFG factor i.e. Total W Peak of PV panel capacity = 3000 / 3.2 (PFG) = 931 W Peak. Now, the required number of PV panels are = 931 / 160W = 5.8. This way, we need 6 numbers of solar panels each rated for 160W.

**Solar Module Cell:** The solar cell is a two-terminal device. One is positive (anode) and the other is negative (cathode). A solar cell arrangement is known as solar module or solar panel where solar panel arrangement is known as photovoltaic array. It is important to note that with the increase in series and parallel connection of modules the power of the modules also gets added.

**Meter Main Combo - Feed Through Panel w/ Main Breaker** In other meter-main configurations, the feed through lugs in the meter main may go to a main breaker panel. The main breaker in the feed through panel protects the panel from any overload so it can be treated like a meter-main panel with no feed through panel and the 120% rule can be

The installation method of the solar combiner box can be chosen according to the actual situation of the work site, usually using wall-mounted, pole-hugging, and ground-mounted. **Wall-mounted:** It is recommended to use expansion screws to fix it on the wall through the mounting holes on both sides of the solar combiner box.
