What is Curacao's energy policy?

In 2009, Curacao developed an energy policy document, which sets out general guidance and governing principles for further study of energy issues.<sup>4</sup> It suggests the goal of reducing energy consumption by 40% by 2020 and encourages the investigation of combining wind power with storage to provide 100% of the island's energy needs.

Why does Curacao use wind energy?

Curacao's long history with wind energy has provided it with valuable experience in integrating variable energy resources into the electrical system while also demonstrating the value of avoiding petroleum-based electricity generation.

How much electricity does Curaçao produce?

Unlike most countries in the world, Curaçao generates about 34 percent of the current electricity production through wind and solar energy. In the Netherlands, that is merely 6 percent. Engineer Richenel Bulbaai from Curaçao defended his dissertation on this subject on 11 October 2019 at the University of Twente.

How many wind turbines are there in Curacao?

Curacao features two of the oldest but most productive wind energy installations in the Caribbean. The first installation, a 12-turbine, 3-MW facility, was placed in service at Tera Kora in 1993.<sup>15</sup> This was followed by an 18-turbine, 9-MW installation at Playa Kanoa in 2000.

Does Curacao have a net metering program?

In 2011, Curacao launched a net metering program for distributed wind and solar generation systems.<sup>11</sup> Residential systems smaller than 10 kilowatts (kW) and commercial systems smaller than 100 kW were eligible to participate. At the same time, large commercial customers could apply for a feed-in tariff for systems up to 1 MW in size.

Does Curaçao have energy-efficient air conditioning?

Bulbaai conducted an extensive research in Curaçao. He analyzed the energy use of almost 400 households, more than 300 offices, 22 hotels, and 9 supermarkets. Many offices were already taking energy-efficient measures, mostly to save on costs. But of the 22 hotels, only sixty percent had energy-efficient air conditioning.

About Us. Strategy. Deploying our innovations in mineral processing and refining, at-source, we reduce supply chain risk and volatility for our ...

To make Curaçao fully sustainable in 2033, the production of solar and wind energy is of great importance, as is proper energy storage. Wind turbines and solar panels play an important role in this. If traditional power generators are still necessary, then the use of biogas is a more sustainable choice.

Onshore wind: Potential wind power density (W/m<sup>2</sup>) is shown in the seven classes used by NREL, measured at a height of 100m. The bar chart shows the distribution of the country's land area in each of these classes compared to the global distribution of wind resources. Areas in the third class or above are considered to be a good wind resource.

Power Resources is a leading provider of exceptional services and support for UPS Systems, Batteries, and Critical Power Equipment spanning over thirty years. We strive to show critical power customers that our services are affordable, and we will develop cost-effective strategies ensuring that your systems are operating at their maximum ...

The combination of W&#228;rtsil&#228;'s BESS and GEMS solutions, supported by the new power plant, will provide grid stability and reliability, reduce unserved energy, and help mitigate the risk of ...
