Why should you choose EnerSys's powersafe; SBS; XC+?

1. Introduction The EnerSys's PowerSafe; SBS; XC+ range of valve regulated lead acid cells and monoblocs is designed to meet today's challenging demands of unreliable grid applications resulting from aging infrastructure, changing climate and reduced dependence on existing fossil fuel generation to name a few.

What are the different types of powersafe; E Batteries?

Offering market-leading performance for power industry applications, PowerSafe; E batteries are available in two series: EA-M (antimony alloy) and EC-M (calcium alloy).

What is a powersafe V battery?

PowerSafe V batteries deliver superior performance while occupying less space than conventional standby power batteries. The use of flame retardant Acrylonitrile Butadiene Styrene (ABS) UL94 V-0 material for the thick wall containers and covers offer high mechanical strength with excellent safety features. Battery Type 8hr. Rate 10hr.

What temperature should a powersafe XC+ battery be operated at?

The recommended operating temperature range for optimum life and performance is between 20°C to 25°C. However, PowerSafe SBS XC+ cells and monoblocs can be operated in the temperature range -40°C to +50°C. To maintain mechanical integrity of the plastic components, the battery temperature in operation should not exceed 50°C.
