Off-grid solar systems are a popular choice in Grenada, which has abundant sunshine all year round. Off-grid solar systems are not connected to the main electricity grid, so they can provide a reliable source of power even in remote areas or during power outages.

Using off-grid solar storage systems allows you to have all the convenience that electricity offers without having to run power lines out to a remote property that may be prone to outages. Solar panels first convert solar energy or sunlight into DC power using what is known as the photovoltaic (PV) effect. The DC power can then be stored in a ...

Off-grid systems also utilize photovoltaic solar panels. These are usually mounted in places where they can receive direct sunlight, such as the roof or ground. When initially absorbed, solar power is in the form of direct current electricity. Each system has an inverter. This converts the direct current over to an alternating current which is ...

Off-grid solar systems need specialized off-grid inverters and battery systems that are large to store enough energy for 2 or more days. Hybrid grid-connected systems use lower-cost hybrid batteries, and only require a battery that is large enough to supply energy for 5 to 10 hours depending on the use.

Grid-scale battery storage will be added to island grids in the Caribbean by technology providers Honeywell in the US Virgin Islands and Leclanché; in St Kitts & Nevis. In both instances, the energy storage systems will be co-located and integrated with solar PV.

You live on a small tropical island a long way from an electric grid or your grid supplies are powered by burning fossil fuels which are rapidly increasing in price. The Grenada and St Vincent grid power system is 96-99% fossil fuels. But there is an alternative and its called solar energy.
