How does a hailstorm affect a PV module?

Donald and Abraham conducted tests to see how a hailstorm might affect the functioning of a PV module. According to the findings, the impact of a hailstorm on a PV module is mostly determined by the material used for the front layer. When cracks occur in the front glass surface, the solar insolation that reaches the solar cell is reduced.

Can PV modules withstand hail?

Hail tests on photovoltaic (PV) modules should be beyond the conventional testing. Power reduction of 21.47% is observed in glass to backsheet PV modules under hail. PV modules with front glass thickness of 4 mm can withstand severe hail damage. Use low wet-leakage current resistance modules for high hail-prone regions.

How does hail damage affect photovoltaic systems?

In particular, hail damage seriously affects photovoltaic systems. The severity of hailstorms as well as impact responses are important factors in mitigating loss, so the first research area that needs to be addressed is the resistance of photovoltaic modules to hail.

How to protect solar panels from hail damage?

Buying resilient panels is the first step to protect solar panels from hail damage. Although most panels manufactured today are relatively rigid, solar panels built with IP68 technology can withstand severe hailstorms. Jackery SolarSaga Solar Panels have IP67 and IP68 rating that ensures these panels are dustproof and waterproof.

What happens if a PV module is broken after a hail test?

If the glass of the PV module is broken after the hail test, then VI, P_{max} at STC, EL, IT and WLCT will be conducted. The thickness of the glass of the PV module will be increased, and the process will be continued with the new sample.

Does hail load affect electrical properties of solar module?

Quantification of the effect of hail load on electrical properties of the solar module was done through a solar flash testing apparatus, developed at UET Peshawar as per IEC 60904-1 standard [33]. In this test, the module was exposed to sunlight (Solar Irradiance Level 800-815 W/m²) at cell temperature of 25 ± 1°C.
