In an effort to track this trend, researchers at the National Renewable Energy Laboratory (NREL) created a first-of-its-kind benchmark of U.S. utility-scale solar-plus-storage systems. To determine the cost of a solar-plus-storage system for this study, the researchers used a 100 megawatt (MW) PV system combined with a 60 MW lithium-ion battery that had 4 hours ...

Batteries aren't for everyone, but in some areas, a solar-plus-storage system can offer higher long-term savings and faster break-even on your investment than a solar-only system. The median battery cost on EnergySage is \$1,133/kWh of stored energy. Incentives can dramatically lower the cost of your battery system.

Lead Acid Batteries. Lead acid batteries were once the go-to choice for solar storage (and still are for many other applications) simply because the technology has been around since before the American Civil War. However, this battery type falls short of lithium-ion and LFP in almost every way, and few (if any) residential solar batteries are made with this chemistry.
