Re: Can I Use Solar for 220 volt AC Well Pump? Yes you can use solar to run a 220 VAC water pump. It isn't very efficient, as it would cost a lot of money to build a system capable of it. The number of batteries isn't dependent on the pump Voltage but rather on the over-all power capacity needed. Like this: The pump has a demand of X Amps @ 220 ...

An inverter takes power from incoming DC voltage and turns the power into AC voltage. If the water pump uses AC power, then an inverter is required if you want to run the water pump using solar power (DC). Usually that inverter will also allow a backup source of power, like AC Grid or generator power, to be plugged in when solar is not available.

Shop for a "split phase" inverter. It should say 110-220, or 115-230 volt. I found this one interesting. They designed it to be stackable, to have more than one in parallel. But also to "stack" their output voltage so that you can have 110v plus 110v to get your 220v, and center between the two connected to ground.
