This document summarizes solar power generation from solar energy. It discusses that solar energy comes from the nuclear fusion reaction in the sun. About 51% of the sun's energy reaches Earth's atmosphere. There are two main technologies for solar power generation: solar photovoltaics and solar chimney technologies.

The application of black-box models, namely ensemble and deep learning, has significantly advanced the effectiveness of solar power generation forecasting. However, these models lack explainability, which hinders comprehensive investigations into environmental influences. To address this limitation, we employ explainable artificial intelligence (XAI) ...

Solar accessories: This can vary, depending on the type of the solar power system. Popular ones are listed below. Solar charge controller: Once a solar battery is fully charged, based on the voltage it supports, there needs to be a mechanism that stops solar panels from sending more energy to the battery. This comes in the form of a solar charge controller, ...
