This means that, under ideal conditions, the 100W solar panel could generate between 97 and 103 Watts of power. However, since the power output is directly linked to Solar Irradiance (W/m<sup>2</sup>), which changes with the time of day, weather, and location, the actual power output of a 100-watt solar panel can fluctuate from 0 to 100 watts.

The cost of a solar power plant depends on multiple factors including brand and quality of equipment, plant location, roof orientation, inverter type, style of mounting structure, etc. For example, a grid-tie system that works with the utility grid (if the power goes out, the system will shut off) costs less than off-grid systems which are independent of the grid.
