Compared to other results from other publications, the PV system in Palestine has higher average daily final yield. Solar electricity delivered to the grid was verified with PVsys package results, and high consistency in energy fed to the grid between the actual and the simulated system was reported.

Finally, the paper proposes a suggestion of unbundling transmission lines in the region to address the current critical status of photovoltaic investment in Palestine. As a result, the typical average yield factor of photovoltaic systems in Palestine is in the range of 1368-1816 kWh/kWp per year with a payback period of 5.5-7.4 years.
