The Danish climate technology company Stiesdal, founded by wind pioneer Henrik Stiesdal, is currently developing a new form of cost-effective, large scale electricity storage, based on hot rocks and plain air as the storage medium. The storage technology is called GridScale and is being developed by Stiesdal subsidiary Stiesdal Storage ...

o Li-ion battery storage systems are too expensive for large -scale renewable energy integration. The good news: o Storage technologies exist that can fill the gap o Thermal storage for days to weeks o Hydrogen storage using amonia as carrier for seasonal storage. We just need to industrialize and implement!

The GridScale energy storage system provides commercially and technologically sustainable storage of large volumes of energy. The GridScale range fits to both the 12-18 h duration required for day-to-day smoothing of solar PV, and the 3-7 day duration required for covering wind power production gaps during low-wind periods.

Stiesdal is a young and fast-growing climate technology company. The main purpose of Stiesdal is to develop and commercialize technologies with high impact on climate change mitigation. This purpose is fundamentally rooted in a conviction that more needs to be done to avert catastrophic climate change.
