

Stora enso battery Saint Barthélemy

Is Stora Enso a sustainable battery?

Stora Enso and Northvolt have entered into a Joint Development Agreement to create a sustainable battery featuring anode produced using lignin-based hard carbon produced from Nordic forest wood.

What is Stora Enso?

At Stora Enso, we believe that everything that is made from fossil-based materials today can be made from a tree tomorrow. As another proof of this, we produce bio-based carbon called Lignode[®]; by Stora Enso, used for sustainable electrification. Our aim is to meet the demands of the global battery market by developing renewable alternatives.

What is Stora Enso & Northvolt?

Stora Enso and Northvolt are joining forces to create sustainable batteries using lignin-based hard carbon produced with renewable wood from the Nordic forests. The aim is to develop the world's first industrialised battery featuring anode sourced entirely from European raw materials, lowering both the carbon footprint and the cost.

What is Stora Enso Oyj doing?

Help[®];2024 Bloomberg L.P. All Rights Reserved. Stora Enso Oyj is preparing to invest about EUR100 million (\$110 million) in a pioneering project to use wood in electric vehicle batteries and offer an alternative to components currently made in China, according to its chief executive officer.

Did Stora Enso invest in lignin EV batteries?

Stora Enso (HEL:STERV) Invests in Lignin EV Batteries, CEO Hans Sohlstrom Says - Bloomberg Skip to content Bloomberg the Company & Its Products The Company & Its Products Bloomberg Terminal Demo Request Bloomberg Anywhere Remote Login Bloomberg Anywhere Login Bloomberg Customer Support Customer Support Bloomberg

What is lignode[®]; by Stora Enso?

Lignode[®]; by Stora Enso is a hard carbon made from lignin- an existing by-product in the production of pulp. Stora Enso's aim is to develop the most sustainable anode material in the world - made from lignin. We are excited to be a part of the journey as a partner in the Polestar 0 project - aiming for a truly climate-neutral car by 2030.

The commercialisation of Stora Enso's lignin-based innovations is progressing. In October 2022, we signed a Letter of Intent with Beyonder, a Norwegian energy storage technology company. The Letter of Intent covers optimisation of properties and commercial deliveries of lignin-based anode material for batteries after industrial-scale production has started.

cathode material with Stora Enso's anode solution Lignode, with the goal of strengthening the development of ...

How Stora Enso's solutions are designed to perform for your needs. Brand owners. Looking to adopt lower impact packaging, reduce plastics, or prioritise food safety? We provide fiber-based materials that align with EU regulations and deliver what consumers want--without compromising on safety or quality.

Volkswagen-backed battery developer Northvolt and Stora Enso are joining forces to create sustainable batteries using lignin-based hard carbon produced with wood from Nordic forests. The aim of the partnership is to ...

Stora Enso Oyj is preparing to invest about EUR100 million (\$110 million) in a pioneering project to use wood in electric vehicle batteries and offer an alternative to components currently made...

The partnership, announced today, will combine Altris' sodium-ion battery technology and its Prussian White cathode material with Stora Enso's anode solution Lignode, with the goal of strengthening the development of sustainably sourced batteries and supporting a European battery supply chain.

Northvolt and Stora Enso to develop batteries from tree material . European gigafactory company Northvolt has partnered with Finland-based pulp and paper manufacturer Stora Enso to develop a battery using lignin anodes. Lignin is a plant-derived polymer found in the cell walls of dry-land plants, which makes up 20-30% of tree composition.
