

The power distribution cabinet cannot store energy

Without a highly reliable power source, data center operators cannot ensure the availability and performance of IT systems. That's why the power distribution unit (PDU) is one of the most important components of the data center infrastructure. What Is a PDU? PDU stands for "power distribution unit."

One key advantage of cabinet PDUs is their space-saving design. They can be easily mounted within the server cabinet or enclosure, minimizing the amount of floor space required for power distribution. Cabinet PDUs can also be daisy-chained together to provide power to multiple cabinets or enclosures, making them highly scalable and flexible.

Energy storage (ES) is a form of media that store some form of energy to be used at a later time. In traditional power system, ES play a relatively minor role, but as the intermittent renewable energy (RE) resources or distributed generators and advanced technologies integrate into the power grid, storage becomes the key enabler of low-carbon, smart power systems for ...
