How does a solar panel installation work?

The installer will have to lift some of the roof tiles to fix the anchors to the rafters in the loft. This will give the solar panel mounts a stable foundation, and will make sure they don't get damaged in stormy weather. Once the roof anchors have been fixed to the property, the installer will attach the solar panel mounting system to them.

How are solar panels fixed to a roof?

How are solar panels fixed to the roof? Installers fix solar panels to a roof by lifting up some roof tiles and attaching mounting brackets to the rafters, before carefully placing the tiles back where they were. They'll then attach rails to these brackets, before locking solar panels into the rails.

What is Dali (digital addressable lighting interface)?

DALI (Digital Addressable Lighting Interface) is a protocol (language) for bi-directional communication between lighting control products. A 2-wire bus is used for communication (commands/data) as well as for power to some devices. It is typically around 16 V when there is no communication, but can be significantly above or below this.

Which direction should solar panels be installed?

“Solar PV (photovoltaic) panels generate electricity from sunlight and will normally be installed on the roof of the building facing in the most south direction. The panels should also face as much south as possible. If you faced east, or west, then expect a yield of around 20% less generation annually” explains David Hilton.

How do I install multiple solar panels?

To install multiple solar panels, you'll need to connect them in a series or parallel connection. Connect all the wires to your charge controller, battery and inverter. This may take some time. Follow the setup instructions very carefully here and make sure all wires are connected exactly as instructed.
