

What type of energy does Venezuela use?

Venezuela relies heavily on domestic production of fossil fuels, with oil and natural gas comprising approximately 90% of the country's total energy supply. Hydro power also plays a key role in electricity generation, accounting for roughly half of installed capacity.

Will Venezuela suffer a deterioration of its power in international affairs?

Venezuela may suffer a deterioration of its power in international affairs if the global transition to renewable energy is completed. It is ranked 151 out of 156 countries in the index of Geopolitical Gains and Losses after energy transition (GeGaLo).

How does Venezuela's economic policy affect energy consumption?

Venezuela's restrictive economic policies (Figure 3) have resulted in a decrease in inflation-adjusted GDP per capita, which has led to a decrease in energy consumption (Figure 4). Venezuela has the refining capacity to meet its domestic demand, but the country's refineries are in poor condition.

Does Venezuela have a natural gas market?

Venezuela's energy sector has lost much of its capacity to collect and use natural gas, preferring instead to burn it off. Venezuela's government regulates natural gas prices, and concerns exist about the pricing structure and regulations for this market.

How much power does Venezuela have?

Venezuela's installed electrical capacity totals just over 30 GW, split roughly equally between fossil fuels and hydropower. The country's largest single power generator is the Guri hydroelectric project (also known as the Simon Bolivar hydroelectric project), with an installed capacity of 10,235 MW.

What is the role of coal in Venezuela's energy mix?

In comparison to oil and natural gas, coal plays a minor role in Venezuela's energy mix, accounting for 0.2% of total energy production and 0.1% of total energy consumption. Venezuela's coal industry has faced challenges such as outdated infrastructure and limited investment, which has affected production.

In 2023, Venezuela held 195 trillion cubic feet (Tcf) of natural gas reserves, making up 73% of South America's total. Most of this gas is associated with crude oil, with 80% produced as a by-product. Despite these vast reserves, much of Venezuela's natural gas is underutilized, used to support mature oil fields or flared due to inadequate infrastructure. Production peaked at 1.12 Tcf in 2001 but fell to 563 billion cubic feet (Bcf) by 2021, hampered by poor investment and lack of ...

(Energy Analytics Institute, Ian Silverman, 14.Mar.2019) -- Heard on the street and LatAmNRG briefs on PDVSA reporting a fire at three Petro San Felix storage tanks and Venezuela's Manuel Quevedo
