This is especially likely if a mixture of different sized and shaped batteries are stored in the same bag, with coin batteries easily becoming stacked or sandwiched between the poles of other batteries by mistake. The best option for loose batteries is to store them in a way that allows them to lay side-by-side.

Where should a rechargeable battery be stored?

Some good 'inaccessible' locations include inside a locked cabinet/drawer, in a childproof storage box, or at the very least, on a high shelf. If you didn't know, rechargeable batteries have different charge level requirements for storing.

How do you store a battery if it's flooded?

Remove batteries from infrequently used electronics between uses. When batteries are left in electronic devices, they discharge much faster than if left in storage by themselves. Storing wet (flooded) lead-acid batteries long-term is not recommended. These batteries require regular maintenance to top up water levels and prevent corrosion.
