How often should a Hyundai PHEV belt be replaced?

I noticed the Hyundai Maintenance Schedule has this belt tagged for inspection every 8,000 kms or 6 months, and to REPLACE every 48,000 kms or 24 months. Replacement is included in the Type 3 Service for the PHEV and HEV. Has anyone replaced or know what replacement costs? I won't bump into 24 months until later this fall but it sounds expensive.

How often should a HSG belt be replaced?

Here in Canada it gets inspected every 8,000 kms and replaced at 104,000 kms or 48 months on the HEV. Much more reasonable than 48,000 or 24 months for the PHEV. Sailormann, I'm also in Canada and the maintenance schedule on Hyundai Canada's website for our 2022 Tucson HEV is scheduled to have the HSG belt replaced at 48,000km.

How often should a HEV belt be replaced?

Much more reasonable than the PHEV. That sounds harsh. The HEV manual says inspect every 8000 miles, replace at 7 years or 56,000 miles. My bad. I assumed the belt on the HEV would have the same replacement cycle as on the PHEV. Here in Canada it gets inspected every 8,000 kms and replaced at 104,000 kms or 48 months on the HEV.

How much does it cost to replace HSG belt?

There is no cost for this. Just click in the upper right corner where it says Login/Join. We look forward to your continued participation. The owners manual recommends replacing the HSG belt at 60,000 miles. I called my local dealership to get a quote on the cost of the 60k service and after a lot of hos and hums they said \$700.

How long does it take to replace a belt?

Taking the old belt off I saw no cracking or deterioration. So to the human eye it looks fine but it has been on the engine for 4+ years and 53,000 miles so a new belt is in order. Ordered online from ebay for \$65.47 - comes from UK and took a week to arrive. It took me 1.5 hours to do the job. 2. Took tension off both tensioners

The only difference was my belt went to the water pump I believe. There is no tensioner so you have to remove the 4 bolts holding the pulley that the belt runs on. This is on the top pump. Then you have to align the holes up when reinstalling blindly. I am glad I went ahead and replaced the belt, the old one was about done.

One comment on "easy" belt changes on hexhead bikes. BMW changed the specification of the alternator belt sometime between when my bike was new, and when my bike was a few years old - and now. The new belt they specify is smaller, and thence MUCH tighter and harder to get on the two pulleys.

nana, its pretty easy, assuming the 8n is original with a 6v generator, loosen the bolts that bolt the generator to its mounting brackets, then push the generator towards the engine as far as it will go, remove the belt from its pulley, then work it off the fan by rotating the fan by hand, let it drop from the bottom of the crank pulley, [if it hasnt already by now] and its ...

Belts and pulleys in a generator are crucial for mechanical power transfer, speed control, efficiency, and maintaining synchronization. Proper maintenance, including replacement, of these components is essential to ensure the generator operates reliably and efficiently, reducing the risk of power interruptions and costly repairs.

Instruct students that belt problems are easily discovered either by visual inspection for cracks, splits, glazing, or oil soakage, or by the screech of slippage. A glazed, cracked, or damaged belt should always be replaced. In servicing a multi-belt setup, it is very important to replace all of the belts when one belt is bad.

Use a square shank screwdriver to catch a generator screw with the slot on the pulley half next to the generator and your tool kit wrench to loosen the nut. Tighten the nut just good and snug with the tool kit wrench and that should work fine. rotate the engine with a wrench on the lower pulley bolt and recheck the generator pulley for tightness, then check the belt ...

The alternator (generator) belt on my Super M is shot.The wide fan/water pump belt is good. I cannot get the pulley sheave to thread loose to get belt slack to remove the belts and replace the small belt. Is there a special tool for this. If I recall,, the tensioner for HSG belt total out around \$350, add 2 belt and labor,, rough guess of \$500 belt set replacement.. Arleady dealt with a number of YF Hybrid that the tensioner arm bushing fail (about 2 sheet of paper thick babbit looking material),, no support in my opinion for load handled..

Also, I want to replace the fan/crankshaft belt. Once I understand how to remove the pulley assembly the crankshaft belt can come off. However the manual crank start shaft is rusted to the frame. There is just enough clearance for the crankshaft pulley to turn, but not enough clearance to get the belt off (or the new one on).

It isnt that easy. There are two belts. One from the crank to the water pump pulley and then the generator belt is behind that one. I agree taking the hood, grill and radiator off is the best way to do it. Gives you the most room and access to the water pump. That belt is adjusted by turning the adjusting ring on the front of the water pump.
